Continuation of 5. does NOT place the application in condition for allowance because: of the reasons of record. With regard to Rink reference, Applicant argues that Rink does not provide for the polymer (a) to be 5-60% by weight of combined polymers. This is not found persuasive and Applicants attention is drawn to col. 7, lines 44-50 of Rink, wherein the composition contains 15-45% of polymer (A) 0-30% by weight of a binder and 6-20% of a cross linker. If polymer (A) is 45%, and a binder (film forming polymer of the instant claims) is 30%, then the sum is 75%, and 45/75 equals to 60%. This is the specific end data point of the claimed range, and therefore the range is anticipated. With regard to Rockhart reference, Applicants argument that the instantly claimed polymer demonstrated unexpected result over polymers of Rockhart, however, the Declaration provided by Applicants compared the Rink reference, and the shortcomings of the Declaration were addressed in the Final Office Action. With regard to WO'646 reference, Applicants argue that the polymer of WO'646 is entirely made of acrylic solution (60-90%) and a polyisocyanate crosslinking agent (1110-40%0. Thus, Applicants state that there can be no room for a film-forming polymer, and there is not motivation to combine the WO'646 with Rink to introduce the film-forming polymer. This is not found persuasive, because on page 8, lines 11-16, WO'646 teaches that additional ingredients, such as plasticizers and flow controllers, and other additives known in the art are typically present in a composition
